Ques2: Write a JDBC program to ask user to enter bookname, author name, number of pages and price using

Scanner class.

Using PreparedStatement insert above asked details in bookdetails. (7 marks)

```
package com.database.connect;
import java.sql.*;
import java.util.Scanner;
public class CallableStatements {
    public static void main(String[] args) {
        try {
            Connection
conn=DriverManager.getConnection("jdbc:mysql://localhost:3306/employee","root","8476"
);
            System.out.println("Connected");
            Scanner sc=new Scanner(System.in);
            System.out.println("Enter number of records");
            int n=sc.nextInt();
            PreparedStatement pst=conn.prepareStatement("insert into
bookdetails values(?,?,?,?)");
            String bookname=null,authorname=null;
            int pages=0,price=0;
            while(n>0)
            {
                System.out.println("Enter bookname");
                bookname=sc.next();
                System.out.println("Enter authorname");
                authorname=sc.next();
                System.out.println("Enter number of pages");
                pages=sc.nextInt();
                System.out.println("Enter price");
                price=sc.nextInt();
                pst.setString(1, bookname);
                pst.setString(2, authorname);
                pst.setInt(3, pages);
                pst.setInt(4,price);
                pst.executeUpdate();
                n--;
            }
            System.out.println("Data inserted");
            sc.close();
        }
        catch(Exception e)
        {
            e.printStackTrace();
        }
    }
}
```

}

}

Subject: Java Lab Practical.

②

```
import java.sql.*;
import java.util.Scanner;
public class CallableStatement {
    public static void main (String args[])
    {
        try
        {
            Connection conn = DriverManager.getConnection
            ("jdbc:mysql://localhost:3306/employee;"
            "root", "8476");
            System.out.println ("Connected");
            Scanner sc = new Scanner (System.in);
            System.out.println ("Enter no. of record");
            int n = sc.nextInt();
            Prepared statement pst = conn.prepareStatement
            ("insert into book details values (?,?,?,?)");
            String bookname = null, authorname = null;
            int pages = 0, price = 0;
            while (n > 0)
            {
                System.out.println ("Enter bookname");
                bookname = sc.next();
                System.out.println ("Enter Authorname");
                authorname = sc.next();
```

```

System.out.println("Enter no. of pages");
pages = sc.nextInt();
pst.setString(1, bookName);
pst.setString(2, authorName);
pst.setInt(3, pages);
pst.setInt(4, price);
pst.executeUpdate();
n--;
}
System.out.println("Data inserted");
sc.close();
}
catch (Exception e)
{
    e.printStackTrace();
}
}
}

```
